

## QA Assignment

This assignment consists of two distinct parts, each requiring a different approach.

### Part 1: Manual Exploratory Testing

Conduct manual exploratory testing on [www.reddit.com](http://www.reddit.com) and report any identified issues.

#### Instructions:

1. Open [www.reddit.com](http://www.reddit.com) in any browser.
2. Perform exploratory testing on the website and document up to 5 bugs.
3. **Provide as much information as possible about the bug:**
  - Bug title, bug description, severity, and any other information you think may be important.
  - Console and Network Logs (if applicable): In case of functionality bugs, and only if you are confident in your bug findings, provide console and network tool logs. Utilize tools like [Jam.dev](http://Jam.dev) or any similar tool that aids in reporting such information.

### Part 2: Content Management System (CMS) Testing

Draft detailed test cases for a Content Management System (CMS) used to update and manage website content.

#### Instructions:

1. The CMS oversees the following content types:
  - Text
  - Images
  - Videos
  - Tags (e.g., meme, news, etc.).
2. Write 12 test cases for the CMS website system with as many details for each test case.

#### **Assignment Submission Guidelines:**

1. Compile your assignment in a single Google Sheet file with 2 sheets for each part of the assignment.
2. For each reported bug, upload evidence (screenshots, videos, etc.) to an external service such as <https://imgur.com/> and attach the link to the respective bug.
